I build systems that stay running. One of them scores credit applications for a Kenyan lender against **a live bank endpoint**. Others take bookings, write loan applications into a lender's own management system, and sell produce over WhatsApp, because that is what the customer actually uses.

01 NOW

Brisk Credit Ltd, Nairobi · Software & AI Engineer

April 2026 – present

- Built and run the credit-scoring API that a partner bank posts to in production (Python, Docker, Linux VPS), with a separate agriculture-finance pipeline because a farmer's cash flow is seasonal and a salaried borrower's is not.
- Built the production website (TypeScript, serverless, Firestore): phone-OTP accounts, a repayment calculator, and an application form that writes into the loan-management system across 42 branches, with fallbacks so no lead is lost.
- Published an MCP server so AI assistants can quote Brisk's products, costs and branches; produce the company's explainer films and office screens.

02 SYSTEMS SHIPPED · SEVEN BUILT, SIX LIVE

	SYSTEM	WHAT IT DOES	STATUS
001	Credit Scoring Engine Fintech · Machine learning	Scoring API for a licensed lender; a partner bank posts to it in production.	● In production
002	Brisk Credit Fintech · Lending	The lender's site; applications written straight into the loan-management system across 42 branches.	● Live
003	Kito Oak Haven Hospitality	Direct-booking site for a Nairobi apartment: two-way availability with Airbnb, a guest-driven price calculator.	● Live
004	Shamba Connect Agriculture	Urban-farming enterprise site; ordering over WhatsApp. Won a client with zero ad spend.	● Live
005	Factoraised Group Automotive	Dealership platform; staff add stock without a developer.	● Live
006	MediOne Pharmacy Healthcare	Mobile-first pharmacy frontend for phones on metered connections.	● Live
007	Men with Disabilities Society of Kenya Non-profit	Accessibility-first site: contrast-verified, consent-gated imagery.	● Built, awaiting launch

03 HOW I WORK

Build — TypeScript, Next.js, React, Python, Docker, Linux, Firestore, REST APIs. One-file sites when one file is enough.

Integrate — M-Pesa and WhatsApp flows, phone OTP, loan-management systems, Airbnb and iCal calendars, Google Sheets as a back office.

AI — Scoring models on alternative data, Claude Code and MCP servers, agent workflows, n8n automation.

Content — AI-assisted film and voice (Remotion, Hyperframes, ElevenLabs, Veo) for Brisk Credit, Shamba Connect and Kito Oak Haven.

04 TRAINING

ALX Africa Software Engineering · Moringa School Artificial Intelligence · Moringa School Software Development · Anthropic Claude Code

Languages: English, Swahili

Open to an implementation partnership for Kenya and East Africa, or joining a team abroad, on site or remote
